

TEXT HANDLER

2023

Batch processing of large text files

Text Handler uses for the text files handling with removing short words by specified word length parameter, and removing all in text punctuation. For text handling there are next steps you should to do:

1. Choose a directory where input text files placed ("Input text files directory" line).
2. Choose a directory where handled text files should be saved ("Output text files directory" line).
3. Set a word length for removing words with lower length ("Minimal word length" line)
4. Set "Remove punctuations" flag if you want to remove all punctuations from text files.
5. Press "Start" button for start text files handling.

APPLICATION REQUIREMENTS:

- .Net Desktop Runtime 7
